

Phase 7 Integration & External Access

Doctor Appointment & Consultation System (Healthcare CRM)

1. Named Credentials

- **Purpose:** Simplifies authentication setup for external API callouts by storing endpoint URLs and credentials securely.
- **Current Status:**
Not required for the current implementation, as the system does not perform any external callouts.

2. External Services

- **Purpose:** Allows Salesforce to automatically generate Apex classes from external API schemas (Swagger/OpenAPI).
- **Current Status:**
Not applicable for this phase since all logic resides within Salesforce.

3. Web Services (REST/SOAP)

- **Purpose:** Enables Salesforce to expose or consume APIs.
- **Implementation Status:**
Not implemented in this project.

4. Callouts

- **Purpose:** Apex callouts are used to send HTTP requests to external systems.
- **Implementation Status:**
No callouts are required because all data transactions occur within Salesforce.

5. Platform Events

- **Purpose:** Event-driven architecture for real-time communication between systems.
- **Implementation Status:**
Not required as the system operates synchronously within Salesforce.

6. Change Data Capture

- **Purpose:** Tracks and publishes changes in Salesforce records for synchronization with external systems.
- **Implementation Status:**
Not applicable in the current version.

7. Salesforce Connect

- **Purpose:** Links external data sources so they appear as Salesforce objects without importing data.
- **Implementation Status:**
Not required, as all data (Appointments, Prescriptions, Patients) is managed directly inside Salesforce.

8. API Limits

- **Purpose:** Controls the number of API requests Salesforce can process per 24-hour period.
- **Implementation Status:**
No external API usage, hence no API limit consumption.
- **Observation:**
API limits were reviewed to ensure system scalability for future integrations.

9. OAuth & Authentication

- **Purpose:** Secures external system access and authentication for integrated APIs.
- **Implementation Status:**
Not required as no external authentication or third-party access is configured.

10. Remote Site Settings

- **Purpose:** Required for outbound callouts to whitelist external endpoints.
- **Implementation Status:**
No external endpoint configured, so no Remote Site Settings are defined.

Hence:

Phase 7 is **marked as “Not Applicable (N/A)”** for the current phase submission.
