

Phase 9: Reporting, Dashboards & Security Review

Doctor Appointment & Consultation System (Healthcare CRM)

Objective

The objective of this phase is to evaluate and configure Salesforce's reporting, dashboard, and security mechanisms to monitor key business metrics and ensure data protection.

In this project, reports and dashboards are used to analyze the performance of appointments, doctors, and prescriptions, while security settings ensure that the system complies with privacy and access control requirements suitable for a healthcare CRM.

This phase focuses on:

- Generating summary reports for doctors and appointments.
- Building a simple yet informative dashboard for clinic monitoring.
- Verifying field-level and organization-wide security configurations.

Reports & Dashboards Implementation

1. Appointments by Status (Summary Report)

Purpose: To analyze appointment distribution based on their current status (Scheduled, Completed, or Cancelled).

Steps Implemented:

1. Navigated to **App Launcher** → **Reports** → **New Report**.
2. Selected **Appointments** (custom object) as the report type.
3. In the Report Builder:
 - Grouped Rows by **Status** field.
 - Added **Count** summarization for total appointments under each status.
 - Added filters (e.g., Appointment Date → Current Month).
4. Saved and ran the report as **"Appointments by Status"** in the **Private Folder**.

2. Prescriptions by Doctor (Summary Report)

Purpose: To view how many prescriptions each doctor has issued, which reflects consultation volume.

Steps Implemented:

1. Created a new report → selected **Prescriptions** report type.
2. Grouped Rows by **Issued By (Doctor)** field.
3. Added count summarization for **Number of Prescriptions**.
4. Saved and ran the report as **“Prescriptions by Doctor”**.

3. Clinic Daily Dashboard

Purpose: To provide a visual representation of daily clinical activities, combining both appointments and prescriptions.

Steps Implemented:

1. Navigated to **App Launcher → Dashboards → New Dashboard**.
2. Named the dashboard **“Clinic Daily Dashboard”** and saved it to a folder.
3. Added two report components:
 - **Appointments by Status** (Donut Chart)
 - **Prescriptions by Doctor** (Bar Chart)
4. Configured titles and date ranges (e.g., Today or Current Week).
5. Saved and refreshed the dashboard.

Security Review Implementation

1. Sharing Settings

- Verified **Organization-Wide Defaults (OWD)**:
 - **Patient**: Public Read/Write (for simplified access)
 - **Appointment**: Public Read/Write

- **Prescription:** Public Read/Write
- Sharing settings ensure collaborative data visibility among roles such as Admin, Doctor, and Support Agent.

Note: In production, these can be restricted (e.g., Private for Patients and Prescriptions) to comply with healthcare privacy standards.

2. Field Level Security (FLS)

- Sensitive fields like **Contact Information**, **Medical Notes**, and **Prescription Details** were reviewed for visibility.
- Access was limited based on profiles:
 - **Doctor Profile:** Full access to Appointments and Prescriptions.
 - **Patient Profile:** Read-only access to their records.
 - **Admin Profile:** Full access to all data.

This ensures sensitive medical data is protected and aligns with data privacy compliance.

Enforce password history: 3 passwords remembered

Minimum password length: 8

3. Session Settings

- Session timeout was reviewed to ensure automatic logout after inactivity.
- Default Salesforce session timeout (2 hours) was retained for this phase.

Purpose: Reduces risk of unauthorized access if the system is left unattended.

Session Settings

Set the session security and session expiration timeout for your organization.

Session Timeout

Timeout Value: 2 hours

☐ Disable session timeout warning popup

☒ Force logout on session timeout

Session Settings

☒ Lock sessions to the IP address from which they originated

☒ Lock sessions to the domain in which they were first used

☐ Terminate all of a user's sessions when an admin resets that user's password

☒ Force relogin after Login-As-User

☐ Require HTTPOnly attribute

☐ Use POST requests for cross-domain sessions

☐ Enforce login IP ranges on every request

☐ When embedding a Lightning application in a third-party site, use a session token instead of a session cookie.

Extended use of IE11 with Lightning Experience

EXTENDED USE OF IE11 WITH LIGHTNING EXPERIENCE HAS NOW ENDED

AS OF DECEMBER 31, THE EXTENDED PERIOD HAS ENDED, AND USE OF INTERNET EXPLORER 11 (IE 11) WITH LIGHTNING EXPERIENCE IS NO LONGER SUPPORTED. ISSUES WITH PERFORMANCE OR

4. Login IP Ranges

- IP restrictions were reviewed under **Setup → Profiles → Login IP Ranges**.
- Not enforced during development for ease of access from multiple locations.
- Can be implemented later for enhanced security in production (e.g., allowing access only from clinic network).

5. Audit Trail

- **Setup → Security → View Setup Audit Trail** was checked.
- This logs all administrative changes such as creation of custom fields, reports, dashboards, and Apex updates.

Purpose: Enables tracking of configuration changes and user actions for accountability.
